

EASY TO MAKE, EASY TO USE ET

Overview

Our lowest-priced trimcap solution, the EasyTrimmer cuts to length, notches, and marks the bend locations in several trimcap materials. These materials include two revolutionary new aluminum trimcap materials as well as traditional plastic trimcap. This material is subsequently manually formed by bending at marked bend points. EasyTrimmer works with most popular trim in the market, creating beautifully edged channel letters that add depth and dimension to your customers' letters.

For those customers who already have automated return bending, the EasyTrimmer dramatically enhances your productivity. Compact and easy to use, EasyTrimmer provides highly accurate cutting and top performance reliability.

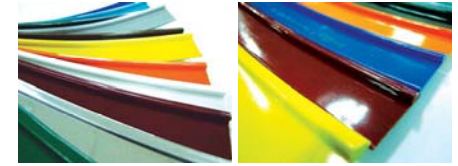

Features

- Material: Trim (width 1, 1.5, and 2")
- Function: V-cut (notching) and pre-bending
- The basic EASYB (EasyBender CLB Windows XP Program) software package provides a user-friendly environment
- A computer-based automatic control system (MS window XP included)
- USB port on the cabinet for user convenience

Advanced technology. SDS Korea's channel bender system has accurate and excellent bending and cutting technology. This is made possible through many years of experience in developing diemaking systems and our enormous investment in research and development. Our products offer unique functions - unseen in other competing products - and are the result of many key patented technologies. SDS Korea is devoted to improving any technology that is needed to serve our customers. With our systems, customers can increase productivity and substantially reduce costs, including labor cost. Furthermore, we are upgrading our systems continuously to meet new demands that are emerging in the market. Customers can, therefore, select any SDS channel bender system without hesitation as we are in tandem with market needs, current and future.

SDS ChanneBender Series

Convenient software. The EASYB (EasyBender CLB Windows XP Program) is a software package that provides a user-friendly environment. It provides various features, which are very simple to use and comes with an easy learning function for each model. For example, it offers calibration functions such as automatically adjusting the length, flange creation, and V-cut for folding an arc or angle. The EASYB program's performance and safety is well recognized by customers throughout the world. It offers a very intuitive interface and various convenient functions, as well as a strong tool path setting function.

Excellent durability and safety. We are proud of the product's reliability and long life cycle demonstrated in various manufacturing conditions for sign products. SDS Korea performs a strict test on each phase suitable for the unique environment for signboard manufacturing. We guarantee that our product can operate accurately with suitable durability in cold or hot climates. We are committed to periodic self-inspections and tests, and we perform various tests on each product before shipping it out to the market. SDS Korea is winner of "Korean World-class Product Award 2002" presented by Ministry of Commerce, Industry and Energy (currently "Ministry of Knowledge Economy") in Korea. We have also obtained the CE certificate.
